Baumann Maschinenbau Solms

Hall 06 / A59

Quality need not be expensive

At drupa 2012, Baumann-Wohlenberg will present three different systems for specific target groups. For all users who want to have precise and solid technology at an excellent price, the latest Economy line of cutting systems was reduced to its essen-

tial features with a focus on motor drives, sensors and pneumatic systems. The operator, on the other hand, carries out all movements where this is reasonable. The physical effort is so low that the fatigue factor can be neglected.

The No 2 cutting system of Baumann-Wohlenberg offers high productivity combined with excellent ergonomics. All central functional modules can be operated automatically or manually. The system is designed for operation by one operator.

The No 3 cutting system of Baumann-Wohlenberg is slated for industrial production. The system combines different automation modules for maximum productivity, and at the same time, reduces the workload to be performed by the operators.

In cooperation with GTS GmbH, Baumann has developed a pile turner which is able to determine the amount of sheets by counting. A tab inserter for order picking is also available as an option.

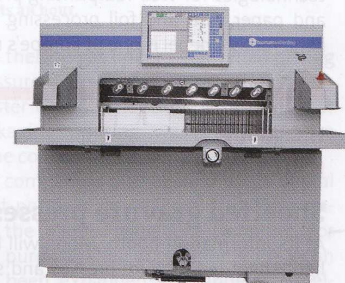

The Economy line comprises, among others, a pile lift ...

the BAB e jogging machine, and

an unloading station

From Wohlenberg, a high-speed cutter will be shown.
