Baumann

35 years of innovative engineering

Despite all insecurities and difficulties in the graphic arts industry, there is a really good reason to celebrate at Solms: 1 July 2013 will be the 35th anniversary of Baumann Maschinenbau Solms. The "starting signal" for the production of rationalisation devices was given already more than 40 years ago when Heinrich Baumann Grafische Systeme decided to design and manufacture peripheral equipment for cutting. On 1 July 1978, the subsidiary Maschinenbau Solms GmbH & Co.KG was established as a full member of the Baumann-Wohlenberg group. The production range has consistently been expanded. Numerous machines and systems that are now standard parts of printing houses and paper converting machines have their roots at Solms.

The Baumann Maschinenbau Solms staff are proud to say that they are always "listening" to the market. The customers' wishes and ideas are taken up and applied wherever possible. At the beginning of this millennium, for instance, cooperation with

TU Darmstadt resulted in the development of a prototype of a fully automated

Volker Assmann, Managing Director of Baumann Maschinenbau Solms: "In the course of time, we have grown into a technological leader in our core business thanks to the innovative Baumann products and by offering solutions tailored to the requirements of the individual customers."

jogging unit which formed the basis of the BASA which, by now, has become firmly established in the market.

Besides the standard range which Baumann-Wohlenberg can supply "off the shelf", the company gives high priority to special solutions which are tailored to the requirements of the individual customer.

The spectrum of machinery manufactured at Solms ranges from manually operated peripheral equipment like pile lifting devices and jogging machines to semi-automatic and fully automatic pile tuners and fully automatic cutting systems.

The Baumann-Wohlenberg Cutting Centre is always equipped with different configurations of cutting systems, but also single machines, and is used for demonstrations and tests with customers' materials as well as basic and special training courses for technicians and users.

Over and above that, Baumann-Wohlenberg relaunched its presentation on the internet with a modernised website and also opened an online shop for pile turners. The company also shows its systems and machines on a YouTube channel and is on Facebook.
