

## Spanish printing house invests in Baumann technology

The BSW-AUP pile turner represents the latest generation of the Baumann-Wohlenberg pile turners.

Graphic Packaging International Spain at Ódena near Barcelona recently purchased a Baumann-Wohlenberg pile turner from OMC, the official Baumann representative in Spain. Graphic Packaging processes approximately 25,000 tons of carton per year (70 percent for the production of multipacks and 30 percent for the production of boxes). These very high volumes as well as their production capacities have led to the decision to invest in an automatic Baumann-Wohlenberg pile turner of the latest generation. The manual handling of paper and cardboard stacks is a back-break-

ing and expensive process. Baumann Pile Turners give the opportunity to save time, reduce the costs and eliminate the physical effort.

The BSW-AUP pile turner installed at Graphic Packaging was especially developed for the requirements of non-stop devices in the feeder of sheet-fed and punching machines. It is available in the formats 3B, 6 and 7. Its main field of application is industrial packaging printing. All operations run fully automatically and programme-controlled. In addition, the BSW-AUP can be upgraded to an inline solution for integration into material logistics.
